

MARKET OUTLOOK

Although storage inventory remains at record levels, the latest EIA Weekly Natural Gas Storage Report reflected an injection that was lower than expected. Mild weather continues, however the Gulf oil spill remains on the forefront and forecasters continue to predict an active hurricane season. These factors may drive increases in energy prices this summer.

As the trend moves towards being “Eco-friendly” and “Environmentally Responsible”, now is a good time to consider buying Green energy. Did you know that businesses can incorporate Green energy with the right procurement strategy? Often 10% Green can be added with little or no price premium. Now is the time to determine how Green fits into your procurement strategy, and how it can make your business more competitive.
